

DELIVERING NEXT-GENERATION DIGITAL ACCESS CREDENTIALING AND CONTROLS

Safetrust and AlertEnterprise partnered to deliver next-generation digital access credentialing and controls – providing frictionless, safe and secure workspace access experiences for employees, contingent workers and visitors.

SAFETRUST + ALERTENTERPRISE = A SAFER AND MORE SECURE WORK ENVIRONMENT

The collaboration between Safetrust and AlertEnterprise reinforces the new way businesses are defining smart and healthy workplaces – reimagining how people access physical spaces, virtual spaces and devices in this time of unprecedented change. With the integration of Safetrust and AlertEnterprise solutions, organizations can establish centralized identity access governance, risk and compliance across their enterprise with secure digital credential options in addition to or instead of traditional badges.

As organizations begin to implement new processes and guidelines to create a safer work environment, it's important to have technology solutions that allow quick, low-cost deployment to minimize business interruptions.

By combining Safetrust's dynamic issuance and revocation of credentials and privileges with AlertEnterprise's AI infrastructure and depth of understanding of business policies and practices, organizations can drastically improve timeliness, compliance and accountability.

CHALLENGE >

KEEPING EMPLOYEES, PARTNERS AND CUSTOMERS SECURE AND HEALTHY

The impact of COVID-19 has forced organizations to completely alter their business practices and take preventive measures to ensure the health and safety of their employees, partners and customers when entering physical office spaces.

BENEFITS:

- **Touchless Access to Physical Spaces**

Reimagining How People Access Physical and Virtual Spaces with Digital Devices

- **Contact Tracing**

Future-proof the Workspace Access Experience During the Pandemic and Beyond

THE SOLUTION

TOUCHLESS ACCESS TO PHYSICAL SPACES

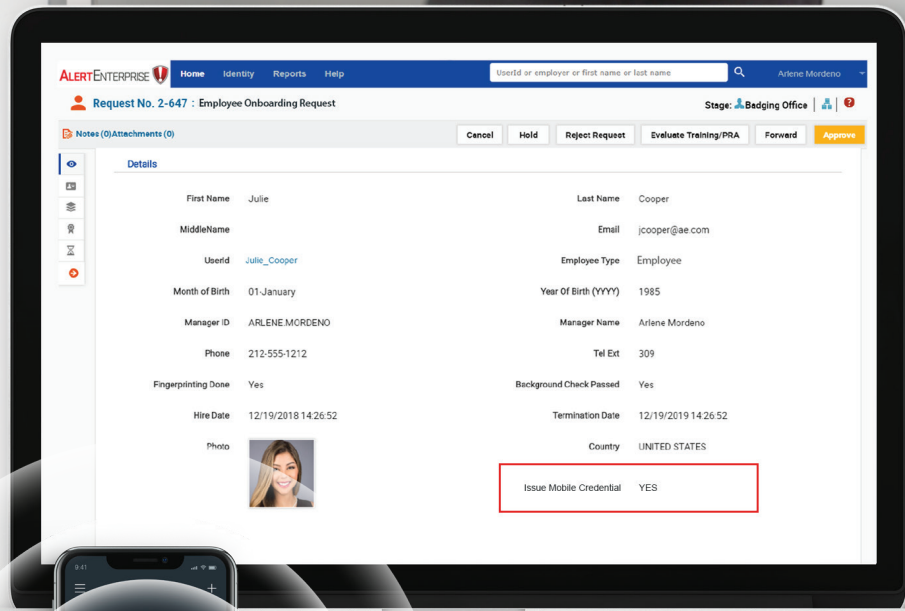

Reimagining How People Access Physical and Virtual Spaces with Digital Devices

- **Reduce Community Touchpoints.** Enjoy seamless access to turnstiles, doors, elevators, and more from a configurable distance, without ever needing to take your phone out of your pocket.
- **Instant Mobile Credentialing.** Instantly issue a secure mobile credential with the click of a button, eliminating the need for face-to-face onboarding and handling of cards.
- **OTA Visitor Pass.** Send guests their visitor pass directly to their mobile device so there is no need for badge handling upon arrival and guests can use the device they already have. Set credential rules in real time to ensure your visitors are only accessing the permitted areas at the permitted times.

- **Complete Control from Hire to Retire.** Establish one digital identity for each employee, contractor, and visitor that you centrally manage and use to define their access to the workplace and IT systems.
- **Automate Onboarding Access Requests and Approvals.** Reduce the burden on badge administrators so they can focus on performance. Automatically creates mobile badge requests for new hires and forwards them to any badging office based on the hire location or other rules.
- **Streamlined Visitor Management.** Visitors can also be issued mobile credentials for one-time use with same notifications and real-time deactivation when access is no longer needed.

▲ **GUARDIAN NEW EMPLOYEE BADGE AND MOBILE CREDENTIAL REQUEST.**

< **SAFETRUST WALLET: PORTABLE WALLET FOR iOS, ANDROID AND WEARABLES.**

CONTACT TRACING

Future-proof the Workspace Access Experience During the Pandemic and Beyond

- **Proximity Monitoring.** Obtain proximity records for mobile devices in your workplace to find close contacts and potentially contain outbreaks before they escalate.
- **Control Spaces Remotely.** Create a safe, hygienic workplace that instills confidence in employees, tenants, and visitors by limiting access to specific areas when too many people are in one space.
- **Ingress and Egress Traffic.** Know who enters and exits your organization even if they do not badge in or out. The Safetrust SABRE MODULE detects nearby devices via Bluetooth and funnels these events to AlertEnterprise's analytics tool.

- **Health & Safety Intelligence.** Tracks confirmed or potentially exposed COVID-19 individuals; identifies exposed areas for lockdown and/or sanitization, social distancing violation, location heat map, and other actionable health and safety analytics.
- **Safe Remote Self-Service.** Health and safety self-service for pre-screening, temperature check of workforce during site entry with policy enforcements and access governance. Automated email and text notification with self-service link capabilities generated to remote workforce.
- **Contact Tracing.** Software integrations between AlertEnterprise and Safetrust provide an intuitive dashboard with data on potentially infected employees and based on Safetrust's person-to-person proximity records.
