Safeguard the hybrid landscape with Workplace Access and Security

The hybrid work landscape is evolving—and so are the demands for access, security, and safety.

Managing today's evolving landscape of digital and physical hybrid work can be complicated—but it doesn't have to be.

As businesses face increased pressure to provide elevated user experiences, siloed and time-consuming processes stand in the way. Fragmented integration across security, IT, and HR departments deteriorates the end-user experience—and compounds complexities in effectively managing access, security, and safety.

To makes matters more complicated, manual recruit-to-retire processes, unscalable custom apps, and security-policy enforcement challenges put organizations at risk of incurring heightened costs and severe compliance deviations.

Workplace Access and Security, from AlertEnterprise and ServiceNow, helps businesses smoothly navigate the hybrid work landscape by minimizing security vulnerabilities, increasing substantial savings, and elevating the overall employee experience.

Elevate workforce experience

In today's hybrid world, companies must manage both physical and digital access to maintain a strong security posture. To meet growing needs, they adopt siloed technologies—creating a fragmented security, IT, and HR ecosystem, which is hard to manage.

In order to remain competitive, companies need to provide employees with digital and physical tools that work together seamlessly—automating access processes and boosting productivity.

Unify digital and physical security management access to elevate the end-user experience.

Manage multiple security systems via one interface—enhancing coherence and efficiency, which in turn uplifts the workforce experience.

Reduce wait time by automating access processing, enabling employees to begin tasks promptly and boost their productivity.

Enable swift responses to access and safety concerns by enhancing communication with instant updates and alerts.
