Alert Enterprise

Guardian SOC Insights.

Delivering security operators the physical access and security insights that matter most.

Every day, you protect your company's people, the places they work and gather, and the systems that secure it.

But in today's business environment, how can your team become more productive and efficient? How can you make better sense of the security data you already have, and stay ahead of increasingly complex risk?

Introducing Alert Enterprise Guardian SOC Insights. Powered by the latest advancements in AI, including integration with OpenAI's ChatGPT platform, it converts volumes of your physical security data into insights and results. All this so you can detect, respond to, and mitigate risk - swiftly and accurately.

Key Benefits.

- Convert volumes of physical security data into insights and results
- Reduce risk, response times and operational costs
- Prioritize tasks with automated workflows and processes

Guardian SOC Insights with AI Chatbot.

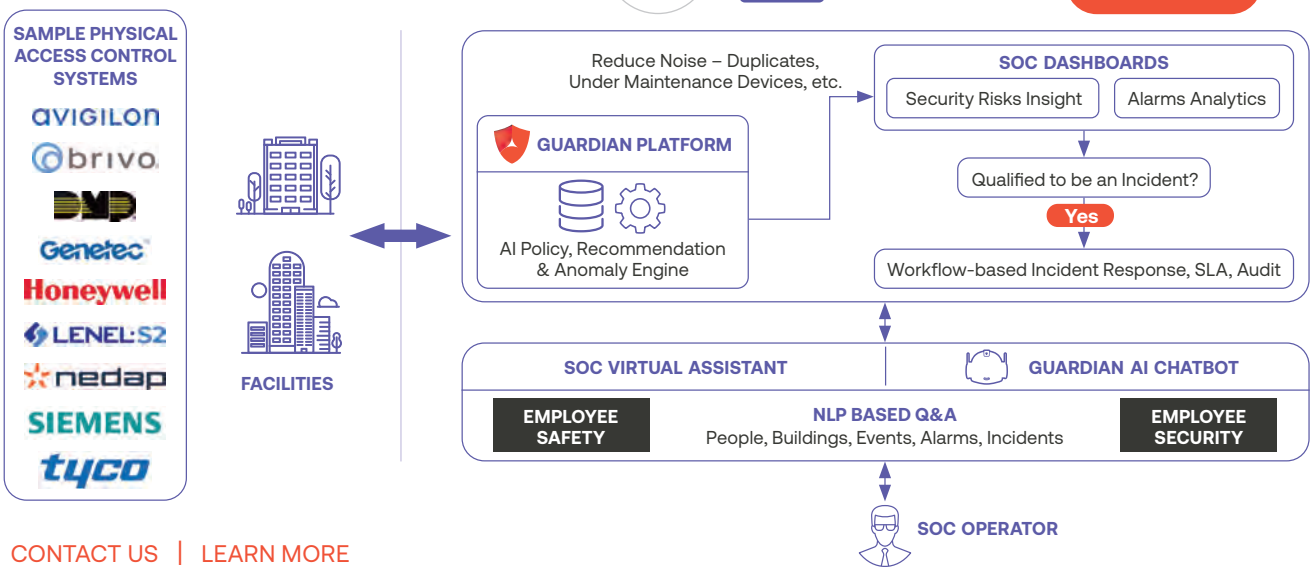
Learn More

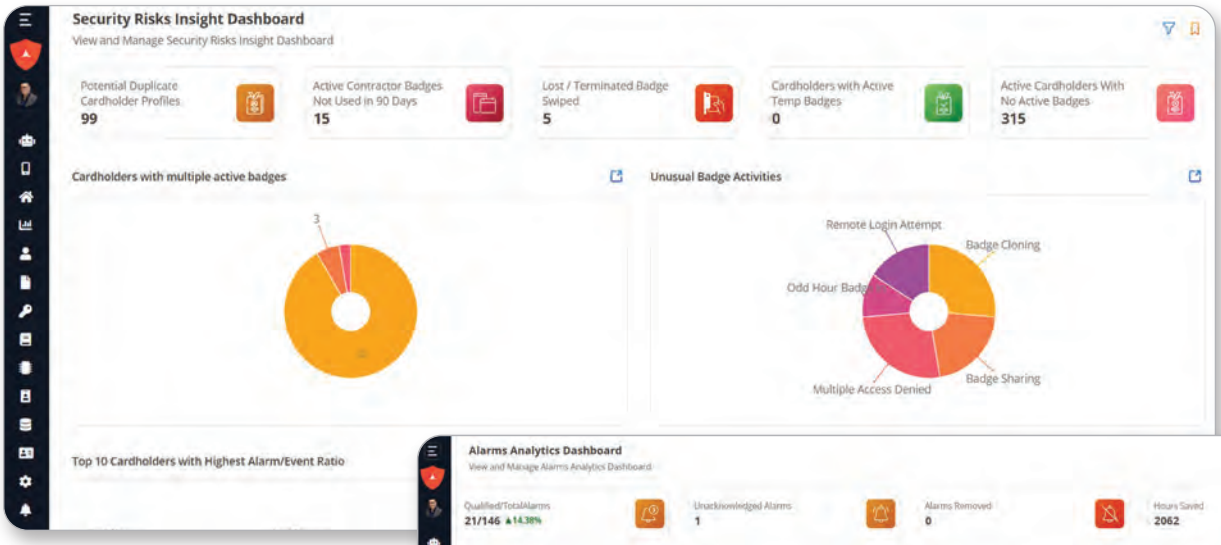


Actionable Insights.

Powerful interactive and intuitive dashboards visualize and bring attention to incidents that need investigation, turning what used to take hours into minutes.

Security Risks Analytics Dashboard.

Identify and act on duplicate profiles, lost or terminated badges, unusual badge usage, and badge sharing and cloning.



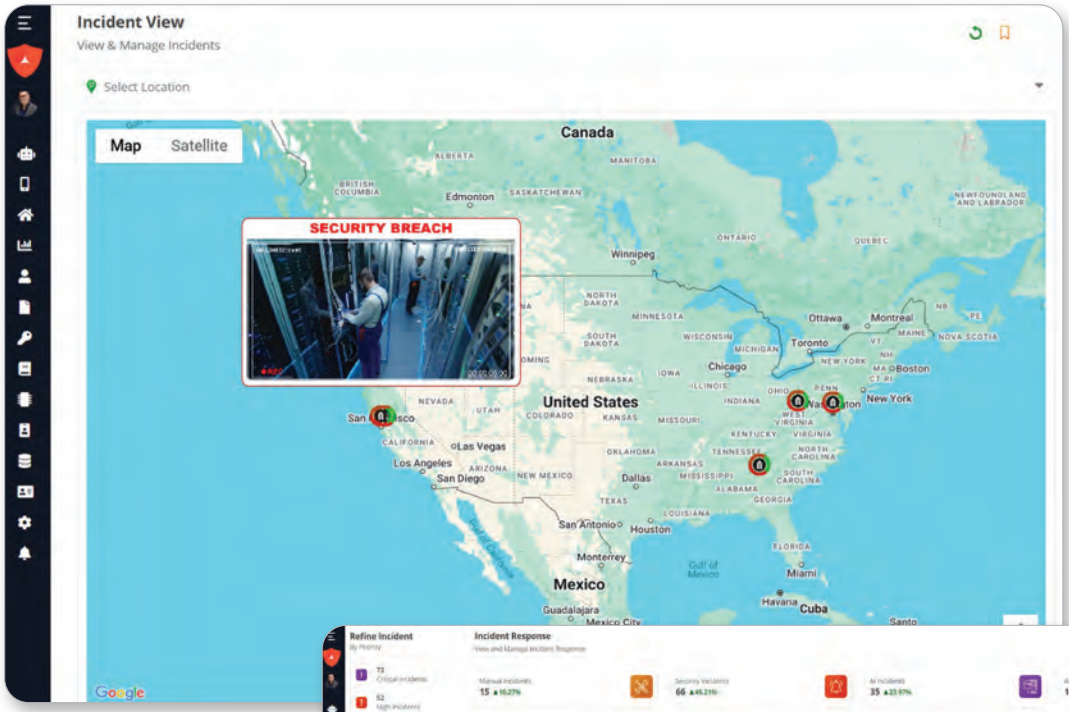
Alarm Analytics Dashboard.

Suppress unwanted alarms, view alarms by building or door, and access valuable trends.

Actionable Insights.

Geospatial Mapping.

View and manage incidents by location, drill down to see incidents by type and severity, and initiate the proper response.



Incident Response.

Experience workflow-based incident response, SLA and audit reporting, and floor plan and video integrations.

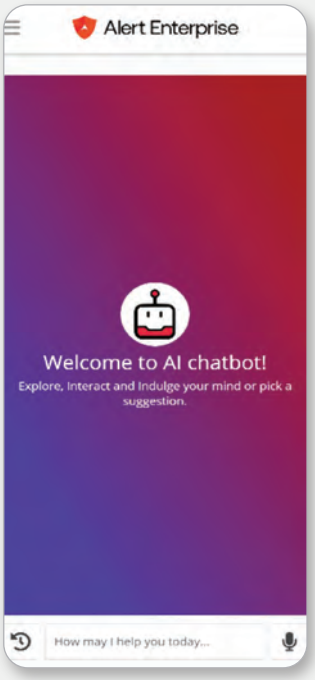
Actionable Insights.

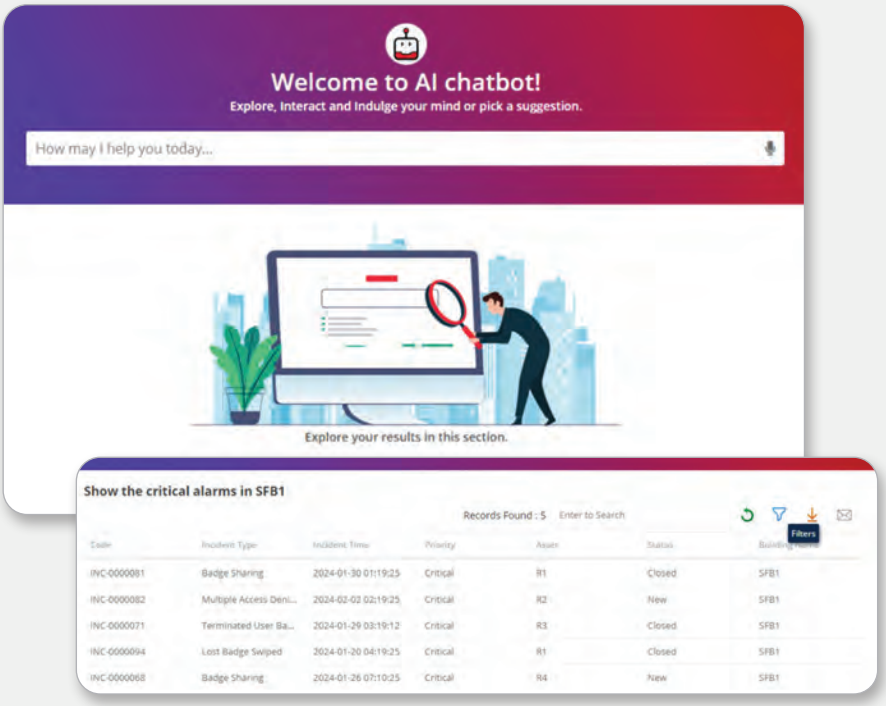
Security Co-pilot.

Patent

Learn More

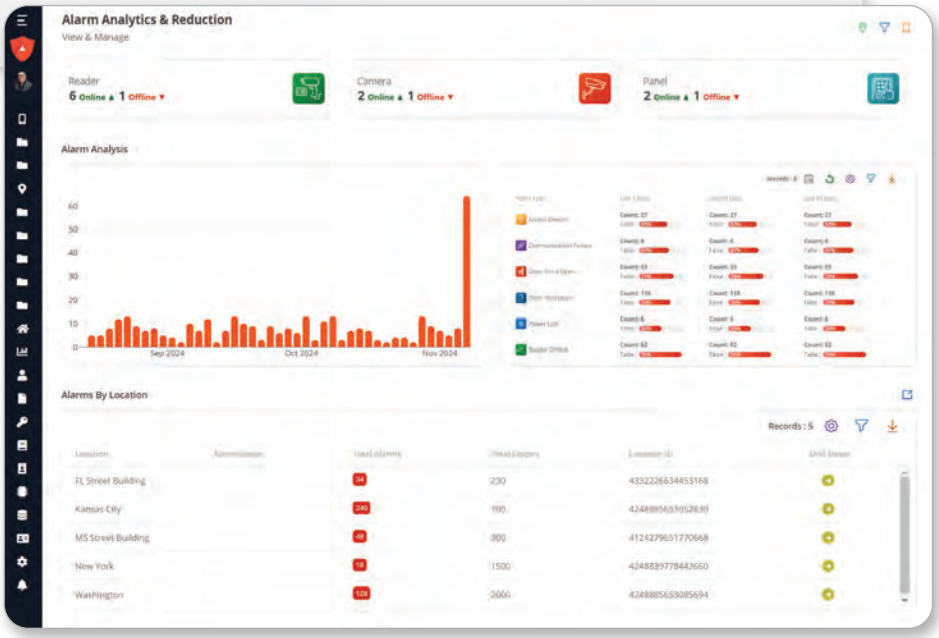
Generates dynamic reports in response to questions posed by the security operator, using natural English language.





Alarms Analytics and Reduction.

Utilizing advanced artificial intelligence and machine learning, our module provides a holistic method for identifying, analyzing, and optimizing alarm performance.

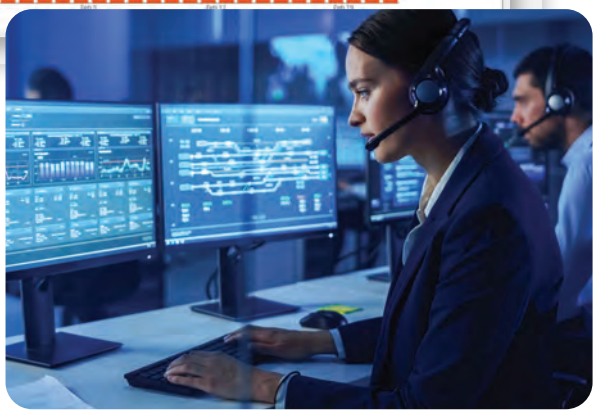


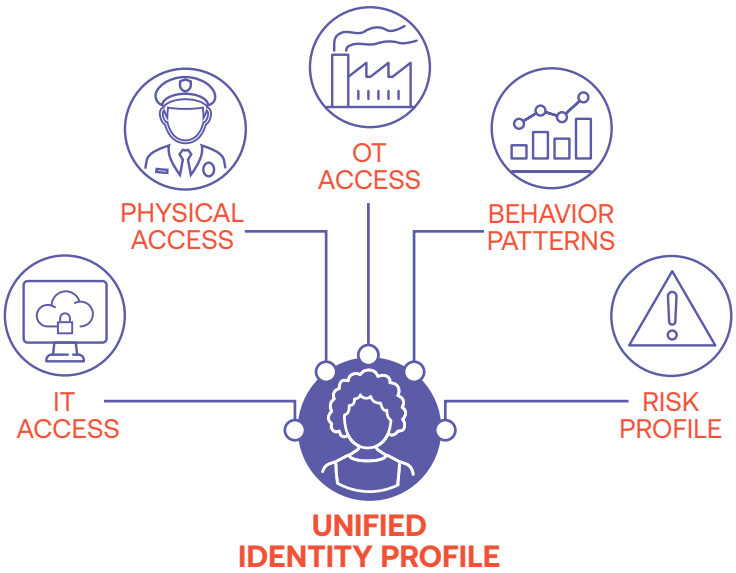
DATASHEET

Actionable Insights.

Insider Threat Monitoring.

Add risk scoring (PRA), background and training checks, and behavior patterns to identity profiles.





Unified Identity Profile.

The foundation for establishing digital trust is a Unified Identity Profile. The Alert Enterprise unified security platform extends that identity across your entire organization, securely and efficiently integrating all of your enterprise security, resulting in true security convergence and Zero Trust.
